

DRAINING AND REDUCING BODY TREATMENT FOR THIGHS, HIPS AND ABDOMEN

With Hyper- Thermal water of
Abano Terme and patented
reducing active agent
REGU@SLIM

A formula rich in active ingredients protects small blood vessels and favors circulation and elimination of excess liquids, stimulating metabolic activity of skins tissues and favors reducing of typical unaesthetics connected with cellulite.

This product is an exclusive mix of three efficient and precious components:

I HYPER THERMAL WATER OF ABANO TERME
The water of Abano Terme is defined "Salty Bromed iodized Water" for the characteristics that make Hyper Thermal water of Abano Terme unique in the world of thermal waters

Rich in trace elements essential for the maintenance of structural and functional integrity of our skin, Hyper Thermal water becomes essential as a catalyzer of cellular reactions due to its effect of augmenting the activity of enzymes, in particular way the SOD (superossido dismutasi) and glutathione peroxidase of anti- radical action.

The important anti- inflammatory effect of Hyper - Thermal water is particularly useful in all treatments against the unaesthetic effects of cellulite, where the adipose tissue presents any fazes of phlogosis – from first stages to the chronic stages of final fibrosis.

Thanks to high concentration of salts, this water "recalls" excess liquids from adipose tissue, that tends to accumulate in intracellular spaces due to poor micro-circulation of the tissue, which helps to regain the correct flow of liquids and lymph helping to oxygenate affected tissue. Iodine present in water helps to "burn" fat in the specific zone of thighs, hips and abdomen.

2 - PRECIOUS CLAY

A special clay with elevated absorption power due to the dimension of colloidal particles which it is composed of. After being

in compact with Hyperthermal Water for a prolonged time takes in all its chemical and physical properties. This clay suspension in Hyperthermal Water vants high draining properties, helping to reduce excess water and toxins favoring blood circulation and used correctly has great visible results on unaesthetics of cellulite.

3 - REGU@SLIM – AN ACTIVE COMPLEX OF REDUCING AGENTS WITH PATENTED EFFECTS

Multifunctional complex with slimming, draining, reducing, modelling and smoothing effect. Accelerates natural process of subcutaneous fat reduction making the skin look toned and smooth.

TEST IN VITRO

A laboratory study on human adipose tissue has proved that active principal elements contained in REGU@SLIM significantly increase following effects on localized adipose tissue associated with cellulite (all documented in a scientific dossier of the complex REGU@SLIM): Lipolytic on adipocits (REDUCING), elimination and decomposing effect of fatty acids formed during lipolysis (DRAINING) and finally elimination of fatty acids that form adipose layer.

TEST IN VIVO

The efficiency of REGU@SLIM was demonstrated in a study conducted on 20 voluntary women, physically healthy and over 18 years old.

Using ultrasound images and skins tissue profilometry analysis, the effects of REGU@SLIM were monitored and documented for 56 days, during this period a product containing the active complex was applied twice a day.

The results have shown that REGU@SLIM active complex helped to reduce by 30% in medium the "orange peel" skin aspect of cellulitic stages and of adipose layer in general.
